Java/Javascript developer for a web-based real estate software solution. Vienna, home office possible

Description

Join us in developing Austria's leading asset and portfolio management software.

We have over 20 years of experience in software development for the real estate industry, serving funds, banks, real estate and site developers and even mobile network operators. At our head office in Vienna, we serve clients in 10 countries and real estate portfolios worth over 31 billion euros across Europe.

Our asset and portfolio management software metamagix.ICRS combines professional depth with state-of-the-art technology and innovation. ICRS is web-based, open and modular, and features high-end interface technology. In short, ICRS offers our customers everything they need to work more efficiently and to make the most of their portfolios: reporting, process mapping, a collaboration platform for the entire company and a reliable database for strategic decisions.

Team spirit, trust, respect and customer service are all part of our DNA. We are a solid company with a strong product and many well-known clients – yet agile enough for flat hierarchies, unbureaucratic processes and individual opportunities for growth and learning.

If what you read resonates with you, and if you would like to support us in making our product even better, we would be happy to meet you.

We are looking for creative programmers who

- strive to make their clients' lives better,
- write excellent code and UIs,
- find innovative solutions for any problem and
- are interested in the real estate industry.
